

## Consultation and Training

Gas Safety Solutions can assist your organisation in a number of area including;

- Risk identification of all areas and aspects of Australian Standard AS 5034 in relation to installation of CO<sub>2</sub> gas and FCB beverage dispensing systems.
- Risk identification and mitigation of dangerous gases including Acetylene, Compressed Oxygen and Liquid Propane Gas (LPG) in relation to the Dangerous Goods Act and relevant State and Territory Health and Safety Legislation.
- Implementing control measures and developing safe work method statements for all risk related processes.
- Training of all stakeholders including service technicians, bar and cellar staff and sub contractors.
- Implementing standardized structured management safety systems across the entire business.
- Developing and implementing Project Plans.

### Training

As a Registered Training Organisation we can provide industry specific training courses from units of competency to certificate level. Courses can be delivered on site or at our purpose built training centers.

### Project Management

We begin with an initial Realisation Meeting with those persons identified in your organisation as having responsibility and identify the key areas to be addressed and the size and scale of your organisation.

The second stage is to identify the Scope of Work and develop a Strategy and Project Plan that identifies the highest priorities to the lowest. This strategy would need to encompass a number of issues like; business interruption, isolation of hazardous areas, information and communication, budgeting requirements, and interaction with service contractors.

The third stage is Implementation and managing the key aspects of the Project Plan with minimal disruption and cost to the business.
